

EnterpriseDX® Event Manager

OVERVIEW

Many activities trigger alarms that don't require actions. Either they "fix" themselves when the temperature changes again in a few minutes, or they're duplicates or recurring alarms. With all the noise, technicians and manager can get complacent and start ignoring all alarms, even ones that really need action.

FEATURES

-  One platform to consolidate all the events and alarms across building control systems
-  Resolve most issues immediately using integrated tools such as Command Manager and Building view
-  Audit trail and trend reporting

ADD A LAYER OF INTELLIGENCE TO YOUR BUILDING CONTROL ALARMS, PRO-ACTIVELY IDENTIFYING TRENDS AND PATTERNS

Since energy control system has their own alarming and events systems, keeping track of all of them, while identifying the real issues in a maze of alarms can be challenging. EDX Event Manager consolidates your alarm management and helps facilities manager identify, prioritize, and act on critical alarms.

EDX EVENT MANAGER SEPARATES YOUR REAL BUILDING ISSUES FROM A SEA OF NOISY RECURRING AND FALSE ALARMS

SORT, FILTER, AND SEARCH FOR ALARMS

Event Manager generates alarms for your enterprise's control systems, which can be filtered, sorted and searched. You'll easily find actions taken, status and notes.

MULTIPLE FLAGS AND PRIORITIES TO MANAGE

Alarms are prioritized 1-8 so your team can sort alarms in true priority

DISPLAY THE ITEMS OF YOUR CHOICE
