

EnterpriseDX® Schedule Manager

OVERVIEW

Many building management services require a minimum notice for change in schedules, maybe as much as a week, making urgent schedule changes prohibitively expensive or time consuming to do manually. Accessing each control system's front end to make mass changes is complicated and time consuming, especially when schedule changes may happen very frequently, and some control systems may not even HAVE bulk change capability. Schedule Manager puts the power back into the hands of the Facility Manager.

FEATURES

-  Manage schedules with granular control & only what you need
-  Quickly change setpoints to resolve comfort issues
-  No more having to use the front end of all your systems

EDX SCHEDULE MANAGER MAKES ENTERPRISE-WIDE SCHEDULE CHANGES A BREEZE

Frequent changes of schedules can occur in an enterprise for many reasons including holidays, store sets, maintenance, inventory, class schedules, etc. Making these changes in bulk varies by control system, and is tedious to change by going into the front end of the control system. Worse yet, some of these systems have NO bulk changes and each location or building would have to be changed one at a time. Schedule Manager allows for these changes to occur with ease from a singular platform with enterprise-wide visibility which allows you to see schedule change trends, optimize and demonstrate compliance with corporate standards, and many other things!

EDX SCHEDULE MANAGER BRINGS EFFICIENCY TO YOUR ENERGY AND FACILITY MANAGERS

ENABLING EFFICIENCIES

Schedule Manager enables maximum efficiencies by centralizing managing and changing schedules across disparate BAS types to quickly comply with last minute requests or large batches - without installing additional hardware or doing cumbersome manual programming at each location.

EASY-TO-UPDATE

Schedule Manager makes it easy to update building equipment schedules across an enterprise, regardless of control systems. Schedule Manager allows for unlimited temporary or permanent schedule updates, making holidays or special hours a breeze.

ENTERPRISE VISIBILITY

Enterprise visibility, analytics and audit reporting capabilities allow you to easily see schedule change trends, optimize and demonstrate compliance with corporate standards.
